

TempTrust Validated Insulated Containers for Dry Ice Shipments

Cost-effective EPS and PUR solutions ideally suited for perishable, dry ice applications

Surpass industry standards and fast track your packaging qualification

Typical regulatory standards are adequate for setting a baseline package design. However, repeated studies show without applying the knowledge of climatic conditions in the areas which products are shipped and stored, companies are missing a crucial element to designing qualified packaging.

Mesa Labs has analyzed standard transportation modes in North America for over 10 years. This includes documenting thousands of data points, across all major origins and destinations. This knowledge enables qualified solutions that exceed industry standards, reduces failures and cuts total-cost-of-ownership for shipping products.

Qualified to surpass regulatory standards

Every packaging solution is fully qualified against specific temperature profiles that take into account your transportation processes and geographical region. They include qualification documents and SOPs for optimized pack-outs. Sample data is available upon request.

Handling dry ice shipments

Our experience in the cold chain extends from ambient to low temperatures, including dry ice. TempTrust Dry Ice solutions are designed using high-quality, molded EPS or PUR, and include a locking lid to prevent heat transfer and provide longer temperature hold times.

Since the solution was developed using EPS or PUR as the insulating materials, it is a cost effective way to ship your products without affecting profitability.

Your pack-out can include both standard operating procedures for assembling your package, and customer-centric, unpacking methods that will allow your customers to handle the dry ice safely upon receipt.

Mesa Labs, a trusted leader in pharmacy cold chain management since 2002

Since 2002 Infitrak, now Mesa Labs, has designed and developed comprehensive cold-chain solutions that protect a product's integrity and ensures patient and consumer safety. Mesa Labs is the only company with all three areas of compliance-based, temperature controlled services and products: packaging, consulting, and real-time monitoring. This translates into a team that is with you all the way from raw materials to end user. For more information, visit us at www.temptrust.mesalabs.com.

- Use less refrigerant
- Reduce container weight
- Durable and recyclable
- Fast time-to-market
